
ABB TECHNOLOGY VENTURES (ATV)

Profile

Peter Löfgren
CEO SynerLeap powered by ABB

Background/Biography

Peter has extensive industry and business experience from several leading positions within ABB and various board member positions. At ABB Peter is responsible for Strategic Collaboration & Business Development within R&D, where he is actively searching opportunities and synergies offered by different types of partnerships both with small and large companies. He is member of boards of start-up company and regional research and development advisory boards, such as Electrumstiftelsen owner of STING, the largest startup accelerator in Stockholm & Kista Science City. Prior to SynerLeap, Peter was heading the global ABB Simulation Network, spanning all sorts of simulation software and hardware resources, in order to fertilize cross utilization and value creation. At ABB Corporate Research, Peter headed the local Automation networks department for seven years.

Peter is the founder and CEO of the growth hub SynerLeap powered by ABB. Member companies can accelerate by accessing unique industrial knowledge and ABB Industry knowledge. Target is to decrease innovation cycles and maximize value creation and where it make sense be a fast track for ABB Technology Ventures investments. Furthermore he has eight patents and has helped to propel new technologies and products in various industrial fields. Peter has a Master of Science Degree from Chalmers University and a Licentiate of Technology Degree (Swedish intermediate PhD degree) from Royal Institute of Technology.
