

Course description

G750

ACS 6000 Medium Voltage Drive Operation and Maintenance

Course goal

The goal of this course is to train the participants in the safe operation, control, configuration, troubleshooting and maintenance of the ACS 6000.

Learning objectives

Upon completion of this course, students will be able to locate the hardware components, to verify and replace drive's parts and to perform preventive maintenance.

The use of the available programming and troubleshooting tools is taught by practical operating exercises.

Participant profile

Electricians, technicians and engineers who operate, maintain or troubleshoot the ACS 6000

Prerequisites

- Basic knowledge of AC motors and drives
- Basic knowledge of MS Windows based computers

Topics

Generalities

- ACS 6000 family overview, system requirements
- AC motor and DTC control

Hardware description (power electronics & control)

- Component and PCB functions
- Hardware schematics and electrical drawings
- PCB settings and configuration

Water cooling system

- Cooling circuit description
- Preventive maintenance

Operation

- Energize/de-energize, start/stop sequence
- Local operation with drive control panel and DriveWindow tool
- Remote control

Software

- Software structure, parameter's description
- Application configuration, parameter settings

Fault-tracing and troubleshooting

- Alarm and fault indications
- Checking and replacing PCB's and components
- Using DriveWindow SW tool for configuration and troubleshooting
- Getting help from ABB

Methods

Lectures and demonstrations
Practical exercises with training equipment
Factory visit

Follow-up training

G794 DriveMonitor™ Operation & Maintenance

Duration

4 days
Max. 8 participants
Tailor-made and on-site training on request

Day 1	Day 2	Day 3	Day 4
<ul style="list-style-type: none">■ Course overview■ Product overview■ Active Rectifier / Inverter Unit■ Hands-on: Checking semiconductors	<ul style="list-style-type: none">■ Line Supply Unit■ Capacitor Bank Unit■ Excitation Unit■ Water Cooling Unit■ Factory visit	<ul style="list-style-type: none">■ Control Unit■ Protection concept■ Hands-on: Operation of the drive■ Application SW■ Hands-on: DriveWindow tool	<ul style="list-style-type: none">■ Preventive maintenance■ Hands-on: Removing phase module■ Hands-on: Exchanging semiconductors■ Hands-on: Troubleshooting

Course description

G761

ACS 6000 Medium Voltage Drive Service and Commissioning

Course goal

The goal of this course is to introduce and instruct the service and commissioning engineer to the ACS 6000. To allow them to learn in a safe and instructive environment the techniques required to carry out the correct procedure in commissioning, servicing and maintaining the ACS 6000.

Learning objectives

Upon completion of this course, the participants will be able to:

- Understand the drive system topology.
- Carry out basic commissioning, service and maintenance work as well as fault-tracing.
- Set and tune application and motor control parameters.
- Locate and replace faulty hardware components
- Using MV Drive Portal database to update the knowledge of the drive.
- Start the certification program for commissioning; after completion of the certification program the participants are allowed to commission the medium voltage drive system.

Participant profile

Commissioning and service engineers, testing and maintenance personnel of ABB or certified technical partners

Prerequisites

- Good engineering knowledge of AC drives and motors
- Personal computer knowledge
- Laptop with DriveDebug and DriveWindow loaded, fiber optic programming tool (RUSB-02 or PCMCIA equivalent)
- Successful completion of the e-learning course G761e – The participant will be enrolled automatically into the e-learning course G761e by applying for the G761 course.

Topics e-learning course (G761e)

Generalities

- ABB medium voltage drives family overview
- Three-level inverter topology, DTC control
- Options and typical applications

Hardware description (power electronics & control)

- Main circuit diagrams
- Component and PCB functions

Water cooling system

- Water circuit description

Protection concept

- Fault classes
- Protective reactions

Topics classroom course

Generalities

- MV data base instruction
- Software compatibility and downloading sequence
- How to use software tools
- How to give a short customer training after commissioning

Demonstration drive

- Component recognition and location
- Starting/stopping procedures
- Motor runs and tuning

Course description

G761

ACS 6000 Medium Voltage Drive Service and Commissioning

Drive commissioning

- Cold commissioning procedure
- Tests and reports
- Calculation of motor parameters

Software description

- Software structure, parameter's description
- Application programming
- Fieldbus programming (interfacing with overriding system)
- Setting and tuning motor control parameters

Fault-tracing and troubleshooting

- Alarm and fault indications
- Measuring and replacing power components

Methods

- e-Learning, internet based course
- Lectures and demonstrations
- Practical exercises with training equipment

Follow-up training

- G769 ACS 6000 Hands-on Training
- G795 DriveMonitor™ Service & Commissioning
- ACS 6000 Expert Days

Duration

Ca. 2 days e-learning
4 days classroom training
Max. 8 participants
