

Environment and energy

ABB AB

ABB is a technology leader in products, systems and services in the industry. Our business includes the following business areas:

- Electrification
- Industrial Automation
- Motion
- Robotics & Discrete Automation

ABB's environmental and energy policy is based on the ABB Group's sustainability policy.

We embed sustainability in our processes, including materials sourcing, product design, operations, marketing, sales, and service to achieve continual improvements.

Environmental and energy management is a core part of our business strategy. We commit to fulfilling our compliance obligations and improving our management processes continuously. We commit to, in a sustainable way:

- Develop and offer resource- and energy efficient products, systems, digital solutions and services which promote sustainability and improve our customers' environmental- and energy performance.

- Reduce pollution, the use of hazardous materials, emissions of greenhouse gases and dependence on fossil fuels.
- Increase resource efficiency, including material and energy savings.
- Engage our stakeholders and provide information and necessary resources to achieve the above.
