## ABB Electrification, Singapore

NEWSLETTER – #ISSUE 1 2020

### **The latest ABB Review on Data Center is now available for download**

For over a century, ABB has proudly published a corporate technical journal highlighting the company's innovations and technological advancements. The latest edition of the ABB Review is focused on Data Center. From actionable strategies for energy efficiency to automation to cyber security, the Data Center edition of the ABB Review is bursting with insights for a safer, smarter and more sustainable site.

### **Smart charging infrastructure for Singapore port's automated guided vehicles**

When completed in 2040, PSA's Tuas Port in Singapore will feature the world's largest fully automated container terminal. This project brings together two of the biggest trends disrupting the mobility industry: the rise of automated guided vehicles (AGVs) and the adoption of electric vehicles (EVs). ABB's technology will enable fast charging of the AGVs which is vital for efficient container movement and for increasing the capacity of the port.

### **Taking charge for an electric future**

On World EV Day earlier this month, drivers from more than 60 countries have made a firm commitment to transition to an electric vehicle. The online pledge campaign, which was launched by ABB and Green.TV, encourages drivers to recognize the crucial role that electric vehicles can play in advancing sustainable mobility.
