

A measure of confidence

Need accurate, guaranteed measurements for a new busway installation?
GE rules!

Now there's an easier way to ensure that your site measurements and the busway delivered match precisely. It's GE's new Busway Measurement Service.

Here's how it works. When you order busway, you contact your GE Account Manager and say, "Measure this." For a flat fee, a highly trained GE Field Engineer will visit the site, analyze the busway path, and take all measurements.

We'll then create a complete drawing detailing busway lengths, turns, joints, etc., and submit them to GE's manufacturing facility in Selmer, Tennessee.

It's a fast, easy, risk-free solution. If there are any material shortages or miscalculations, GE will make it right and pay for any additional busway required.

**Looking for a measure of confidence for your next busway project?
Call your GE Account Manager now!**
