

PMAFIX Pro conduit fitting IP68 + IP69K static and dynamic To reach highest quality requirements

© PMA 11/2015

The extremely successful and technically appreciated PMAFIX System has been developed further to create the PMAFIX Pro product range.

These fittings are the product of experience gained over many years in the most varied application areas and as such encompass the requirements of many users worldwide.

The PMAFIX Pro has two components, an outer body and an inner sealing element. The sealing element is mounted on the end of the conduit and then both are pushed together into the outer body.

The sealing element functions both as a seal and as a locking mechanism providing all ingress protection grades up to IP68 and IP69K. Even in applications where there is long term continuous movement between the conduit and the fitting IP68 and IP69K are fulfilled. PMAFIX Pro is worldwide the first cable protection fitting to be manufactured using a modern two component injection moulding process.

Practical Advantages

- Newest technology
- Highest international quality standards
- Meets all ingress protection categories up to IP68 and IP69K
- Maximal assembly and operating safety
- PMA corrugated conduit range
